Web Systems and Technologies Lab

Project #5

Create a Web application for the Office of the Registrar that can be used to create and manage the list of students that are candidates for graduation.

It must also include another module that will allow the registrar to automate the recording of the results of evaluating each candidate.

- Must include specific functionalities that will allow a registrar's staff to create and manage students that are candidates for graduation.
  Must also include a way to view the list of candidates with an option to search.
- Computerized the record keeping of the results of evaluating a particular candidate.

Reminders:

- Design your own database and User Interface
- Populate database tables with test data.
- Set up an interview with the concerned department if you are not familiar with the procedure or the process.

Submission Requirement:

- The entire application must be uploaded to your web site and accessible over the web.
- System documentation in PDF format must also be uploaded. Include only the following information in your documentation:
- Description of the Project
- Capabilities of the System
- Software Tools Used in the Development Process
- Source Code
- Structure of each Table
- Short profile of the development team

Target Date of Submission:

- On or before February 19, 2022
